In view of the appeal brief filed on 4/28/08, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 6-7 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over GB, 2064477A, in view of Yasuda, U.S. Patent No. 4753322.

Regarding claims 1 and 10, GB '477 discloses an apparatus for taking bags carried by a pair of carrier tapes 3, 5, two carrier tape winding spools 11, 13 positioned coaxially with one another; and a different gear unit 17 positioned between said spools, said differential gear unit 17 adapted to be, in use, removably connectable to shafts (no reference number assigned) of a bag loader whereby two carrier tapes can be wound up on said spools with equal tension, see figure 2, and page 1, lines 35-125.

It has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. In re Hutchison, 69 USPQ 138.

Yasuda '322 shows a shaft (near 11) supporting two sheaves (i.e., spools), see figure 1.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the apparatus of GB '477 by using a shaft that can support two spools as taught by Yasuda '322, to save costs in parts and time during the assembly.

Regarding claims 6-7, as stated above, GB '477 explains the differential gear 17 described in (U.S. Patent No. 3406592), showing a housing (12, 14) and removably connectable to the shafts (68, 72) by removing the bolts (32, 34, 36, 38), see page 1, lines 78-80.

Allowable Subject Matter

Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
